

The Lindamood Phoneme Sequencing Program (LiPS) stimulates phonemic awareness. Individuals become aware of the mouth actions, which produce speech sounds. This awareness becomes the means of verifying sounds within words and enables individuals to become self-correcting in reading, spelling, and speech. It includes a wide array of magnetic manipulatives, phonological awareness, and sequencing stories. In the picture, Cody is using a mirror as he looks at the position of his mouth when making a certain sound. Payton is reading one of the books that is part of the program.
